

The Relax Sauna stands Heads & Shoulders above any other FIR Sauna ! Why ?

How does the Relax Sauna compare to other Portable Saunas ?

Relax Sauna

2 Sauna radiators each generating 100%FIR light sit inside the tent by your feet. Your feet can be placed on top of each radiator.

20 of these Patented ceramic semi-conductor chip are in each of the 2 radiators. The computer program embedded in the chip allows only 100% FIR Energy between 4-14 microns, as documented by the FDA.

The Relax Sauna (made in Taiwan) is the only portable Sauna in the world that uses a special technology, i.e. a semi-conductor chip. This makes the Relax Sauna not only unique, but also more effective than any other portable (or wooden) sauna. The Relax Sauna technology is listed as a medical device with the FDA. (Our 510(k) # is K053376.) The FDA has verified that the invisible light rays produced by the Relax Sauna radiators are between 4 - 14 microns (at 140-170 degrees) , which means that these rays are 100% absorbable Far Infrared Light, which we call healing light. The Relax Sauna patented ceramic semi-conductor chips filters out all non-healing energies, which can be a distraction for absorbing the pure healing FIR light.

All other rays of light (including Near Infrared) are NOT absorbable by the human body, and are usually therefore resisted by the body, and in the case of Ultra Violet Light, which is very strong, can cause not only resistance, but tension, friction, and then sun tan and/or sun burn.

The Relax Sauna semi-conductor chips converts electrical energy to absorbable FIR energy between 4-14 microns (at temperatures up to 140 - 170 degrees), excluding both near and medium infrared rays which can be harmful to the body. Hundreds of other "FIR" Saunas made in China use a hot plate (or heating element) and a black cloth impregnated with charcoal/carbon, which generates only about 20% FIR energy. From experience, we know the Relax Sauna "feels so much better", and takes a lot less time to complete a sweating treatment than any of these other less expensive saunas. The technology of the Relax Sauna is light waves (no pun intended) ahead of the "primitive" technology used in other portable saunas. We recognize the role these saunas do play in the promotion of the healing affects of Far Infrared Light. We don't however believe, they have the intensity to heal large diabetic ulcers in 7 weeks, 20 minutes a day, as The Relax Sauna technology has shown itself able to do.

We have found that the Relax Sauna technology works in about 1/2 the time of other portable sauna technologies. Generally it just takes about 8 minutes to start sweating in the relax sauna, compared to 18 minutes in most other portable saunas. In 20 minutes, you can experience a total sweating treatment, as compared to about 55 minutes in other portable saunas. We have also found that many individuals who have purchased Relax Saunas from us have previously owned other portable saunas that they were very disappointed with, in that they did not sweat and did not get hot enough. The Relax Sauna generates a very PURE Far Infrared Light, as well as a very Intense FIR light. The Relax Sauna also uses 1500 watts, while most of the other portable saunas only use about 1000 watts, and thus do not generate as strong a healing light.

The Relax Sauna has a patent on the 40 semi-conductor chips used in their radiators. This is the Differentiating factor in creating the Far Infrared Healing Light. It took 10 years to invent this chip. A recent imitator of the Relax Sauna claims to have 2 ceramic radiators (that look like they cost \$15 each at a discount center) that generates 7-14 microns of energy, and later they say it generates 4-14 microns of energy. They show a graph showing that it does this at 20 degrees C (68 F). **From what we can ascertain, at high temperatures (110 - 170 degrees), their radiators emit very little, if any FIR Healing Light.** We believe their advertising to be very misleading, probably untrue, & contradictory. They imply they use semi-conductor chips, which is definitely not true. We have customers who have bought this sauna, reported to us how harsh the energy was in comparison to the warm energy they experienced in the Relax Sauna, were incredibly disappointed, returned them, and bought ours, and appreciate the Relax Sauna immensely. **A good sweat does not mean you are eliminating heavy metals or toxins if it is not FIR healing light.**

How does the Relax Sauna compare to wooden FIR Saunas ?

We have sold a number of Relax Saunas to those who already own wooden Far Infrared Saunas, and for which they paid 3 or 4 times the cost of the Relax Sauna. One main reason they have decided to purchase the Relax Sauna is that they do not like waiting 20 minutes or so for their sauna to heat up. Those who own spas cannot service their customers on demand as well for the same reason. The Relax Sauna heats up instantly, and in 20 seconds one can feel the healing light that penetrates, and is absorbed by the body. We have been told by many that they like the fact that your head is NOT inside the Sauna. One lady who was giving a talk after one of our talks was so excited that she finally found a sauna that she could recommend to people because of that feature.

The Relax Sauna is the only sauna that uses a patented semi-conductor chip that guarantees 100% FIR Light. No wooden sauna can match this technology. Some use carbon; others use ceramic chips. But the Semi-conductor chip used by the relax sauna is documented by the FDA to emit 100% absorbable Far Infrared Light (between 4 and 14 microns), and technologically appears to be far more advanced than the technologies used by other saunas. The Relax Sauna technology is also listed with the FDA as a medical device. Not all wooden saunas are 100% Far Infrared Light, nor are they necessarily Medical devices.

People also love the fact that the Relax Sauna takes only about 2-3 minutes to put together. Similarly, it takes only about 1-2 minutes to take apart, and comes with its own carrying bag. The comfortable deluxe chair comes with it, and weighs about 9 lbs, while the radiator & cover fit in the carrying bag and weigh 17 lbs. You can take it on a trip, whether by car or plane, can use it on a patio or even outside. It is convenient, and works very effectively. The Relax Sauna suggested retail price is \$1050 - \$1200 in the United States.

The Relax Lie Down Sauna is an alternative Sauna for Massage Therapists, designed to fit on a massage Table.

This 1000 watt Lie Down Sauna contains the same technology as the Relax (Sit-up) Sauna, & also utilizes the reflecting surface of the tent to shine 100% pure Far Infrared light.
